

DATA PROCESSING ANALYSIS TEAM AUGUST REPORT

Venue : NHM room

Date and time : 20th September 2023 @ 1:00 pm

Members present :

- 1) Lalkhawngaihdawngi chinzah
- 2) Ricky Laldinliana
- 3) Christine Chhuanmawii
- 4) R.Lalthlanpuia
- 5) C.Khaiphotha
- 6) Blondie H Laldinpuii

The meeting was conducted by the convener and invites the member secretary to move on with the meeting. The following points were addressed.

1) Health Management Information System (HMIS) -

a) 1st trimester Ante Natal Care :

Percentage of 1st trimester ANC registration during July 2023-2024 is 123 out of 197, 62.4 % which is a little bit lower than 1st quarter 64.82 regardless of functional HWC's in the district, not much improvement is seen in 1st trimester registration, which proves that HWO's performance is not good as expected.

b) 4 Ante Natal Care :

Percentage of 4 ANC during the month of July is 82 out of 197, which is 41.62 and 41.05 in 1st qtr 2023-2024, only a small improvement can be seen regarding 4ANC. One reasons for low performance in 4 ANC is due to many villages covered by one SC's i.e. Damdep SC covers 15 villages and Tuithumhnar Sc covers 11 villages where villages are also very scattered and hence they are not always reachable by the staffs as well as not accessible even for the PW's.

c) Iron Folic Acid distribution :

IFA distribution percentage for the month of July is 65.48 and in 2023-2024 1st qtr are 49.92, reason for improvement in IFA distribution is due to adequate supply from the state as well as awareness given to PWs during ANC counselling.

d) Institutional delivery :

Percentage of Institutional delivery during the month of July is 70.55% and 1st qtr 2023-2024 percentage is 68.91. Some improvement is seen regarding this and the main reason for this improvement is that SBA trained personnel is now conducting delivery in the HWCs.

e) Fully immunized children :

Percentage of fully immunized children during the month of July is 63.80% against live birth, and 1st qtr 2023-2024 are 61.63 only. A slight improvement is seen fully immunized below one year of age, but, fully immunized below one year of age changes every month because of the recipient.

f) Home Based New Born Care (HBNC) :

HBNC performance for Home delivery for the month of July is 60.42% and for institutional delivery is 26.09%, we have low performance in the institutional delivery regarding HBNC, ASHA coordinator have to be informed, and take action in the matter.

2) Intensified Diseases Surveillance Programme (IDSP) –

A) Integrated Health Information Platform (IHIP): In July IHIP reports performance in L form, P form and S form is very good as always and ranking 1st again in timely reporting.

1. In S form reporting there are 33 health facilities reporting at a 99% which is ranked no.1 in Mizoram. Most common reported cases are only fever with more than 7 days (321) and animal bites –others (35).

2. There are 9 facilities reporting P form and at 99% Lawngtlai district rank 1st again. Most common cases reported are Malaria (924), Scrub typhus (398), only fever with more than 7 days (252), cough with fever more than 2 weeks (62) and Acute Diarrheal Diseases (22) as well as Typhoid (452) cases. These illnesses reported are most common during this month of May, June, July periods.

3. L form is being reporting form 9 facilities and also attain 1st rank. Majority of cases reported are 1121 Malaria cases, 615 typhoid cases and 441 cases of scrub typhus.

3) Grievance redressed: Follow up of reports received from S.Lungpher PHC's and Sangau PHC during the month of July regarding inadequacy of HMIS reporting formats. Action was taken by printing more HMIS formats.

4) Malaria Report –

- Total no of 5473 tested cases and 1429 positive cases detected in august, PV 279 cases and PF 769 cases and a slight decrease in positive cases than the month of July.
- Chawngte with increase positive rate due to sumsilui sc increase surveillance
- Decreased in testing due to active case search and clinic under lawngtlai mc
- Many cases under lawngtlai mc came from hospital (cases from different places within district).

Action points:

- 1) For improvement in ANC, HWO/MO Ayush need to be more active in screening more PW as well as increase in 4 ANC's in their SC areas. They need to set their mind in the Indicators and work accordingly.
- 2) In terms of IFA distribution, the SC staffs need to continue conducting counseling about Anemia in Pregnancy and its effects on Mother and the Child and for that they should be made aware of the importance of taking IFA tablet during pregnancy which can even lead to death in Mother and infants.
- 3) For increasing institutional delivery the facilities need to be equipped for conducting delivery and for purpose the State need to take action in upgrading the facilities which are staffed with SBA trained personnel.
- 4) Regarding fully immunized children, percentage can be increased during September IMI
- 5) For increasing in the percentage of HBNC, district ASHA coordinator will take action.
- 6) IHIP performance is good as compared to other programmes and hopes to see good performance in the future too.
- 7) Malaria Report –
 - Due to high fever case incidence in vathuampui and parva SC, mass screening is proposed and is ongoing.
